

List of Figures and Tables

Chapter 1 Introduction

Figure 1.1:	Linear polymer.	12
Figure 1.2:	Polymer with back bone chain and pendant.	12
Figure 1.3:	Repeating structure.	13
Figure 1.4:	Various types of polymers.	14
Figure 1.5:	Fringed micelle concept for polymer morphology.	18
Figure 1.6:	Models proposed for chain folding in single crystals of polymers.	20
Figure 1.7:	Specific Volume versus Temperature graph.	22
Figure 1.8:	Model representations of the amorphous state: (a) interpenetrating coils, (b) and (c) honeycomb and meander model, (d) folded chain fringed micellar grains and (e) fringed micellar domain structure.	24
Figure 1.9a:	Cross-sectional view of the structure of semi-crystalline polymers.	26
Figure 1.9b:	View from parallel to the machine-drawing plane of the structure of semi-crystalline polymers.	26
Figure 1.10:	Energy partitioning in SRIM.	47
Figure 1.11:	SRIM calculated electronic (ionization) and nuclear (Phonons+vacancies) LET for 100 keV and 1MeV Ar ion irradiation of polypropylene.	52

Chapter 2 Instrumentation and Technique

Figure 2.1:	General layout plan of the cyclotron laboratory.	66
Figure 2.2a:	Configuration of Dee chamber with the pole pieces. The spaces are also shown.	68
Figure 2.2b:	Profile of the clamp plate attached to the chamber.	68
Figure 2.3:	Circuitry used for stabilizing the voltage of the DC generator for the main magnet and the analyzer.	69
Figure 2.4:	Variation of the magnetic field of the main magnet in the chamber.	69

Table 2.1:	The detailed characteristics of the machine are summarized as below.	73
------------	--	----

Chapter 3 Experimental Details

Table 3.1:	Some of the physical and chemical properties of the polymers used.	106
Figure 3.1:	Two roll mill.	110
Table 3.2:	Thickness of the polymers used.	111
Table 3.3:	Range and energy loss of 3 MeV proton in polymer used.	115
Table 3.4:	Irradiation details of polymers.	116
Figure 3.2:	FTIR Spectrometer.	117
Figure 3.3:	Vickers' Microhardness Tester with computer setup.	119
Figure 3.4:	Scatch of Microscope-Vickers' Microhardness Tester.	119
Figure 3.5:	LCR meter.	122
Figure 3.6:	Schematic diagram of sample holder used in AC electrical conductivity measurement.	122
Figure 3.7:	Sketch diagram of TGA measurement.	123
Figure 3.8:	Sketch diagram of DSC measurement.	124
Figure 3.8:	TGA/DSC measurement with computer setup.	126

Chapter 4 Results and Discussion

Figure 4.1:	FTIR spectra for pristine and irradiated polypropylene films.	131
Figure 4.2:	Conductivity versus Log f for pristine and irradiated polypropylene films.	133
Figure 4.3:	$\tan \delta$ versus Log f for pristine and irradiated polypropylene films.	134
Figure 4.4:	Dielectric constant versus Log f for pristine and irradiated polypropylene films.	134
Figure 4.5:	TGA themograms for pristine and irradiated polypropylene films.	136
Figure 4.6:	$\ln (\ln(m_0/m))$ versus $10^3/T$ (K^{-1}) for the pristine and irradiated polypropylene films.	136
Figure 4.7:	Optical micrographs of pristine and irradiated polypropylene films; (a) pristine, (b) 10^{13} ions/cm ²	138

	and (c) 10^{14} ions/cm ² .	
Figure 4.8:	FTIR spectra for pristine and irradiated polyimide/kapton films.	142
Figure 4.9:	Conductivity versus Log f for pristine and irradiated polyimide/kapton films.	144
Figure 4.10:	$\tan \delta$ versus Log f for pristine and irradiated polyimide/kapton films.	144
Figure 4.11:	Dielectric constant versus Log f for pristine and Irradiated polyimide/kapton films.	145
Figure 4.12:	TGA thermograms for pristine and irradiated polyimide/kapton films.	146
Figure 4.13:	DSC thermograms for pristine and irradiated polyimide/kapton films.	147
Figure 4.14:	Microhardness for pristine and irradiated polyimide/kapton films.	148
Figure 4.15:	Optical micrographs for pristine and irradiated polyimide/kapton films (a) pristine, (b) 10^{13} ions/cm ² , (c) 10^{14} ions/cm ² and (d) 10^{15} ions/cm ² .	150
Figure 4.16:	FTIR spectra for pristine and irradiated polyethylene terephthalate films.	154
Figure 4.17:	Conductivity versus Log f for pristine and irradiated polyethylene terephthalate films.	156
Figure 4.18:	$\tan \delta$ versus Log f for pristine and irradiated polyethylene terephthalate films.	157
Figure 4.19:	Dielectric constant versus Log f for pristine and irradiated polyethylene terephthalate films.	157
Figure 4.20:	TGA thermograms for pristine and irradiated Polyethylene terephthalate films.	160
Figure 4.21:	$\ln(m_0/m)$ versus $10^3/T$ (K ⁻¹) for the pristine and irradiated polyethylene terephthalate films.	161
Figure 4.22:	DSC thermograms for pristine and irradiated polyethylene terephthalate films.	161
Figure 4.23:	Microhardness for pristine and irradiated polyethylene terephthalate films.	162
Figure 4.24:	Optical micrographs for pristine and irradiated polyethylene terephthalate films (a) pristine,	165

	(b) 10^{13} ions/cm ² , (c) 10^{14} ions/cm ² and (d) 10^{15} ions/cm ² .	
Figure 4.25:	FTIR spectra for pristine and irradiated polyether sulfone films.	168
Figure 4.26:	Conductivity versus Log f for pristine and irradiated polyether sulfone films.	170
Figure 4.27:	tan δ versus Log f for pristine and irradiated polyether sulfone films.	170
Figure 4.28:	Dielectric constant versus Log f for pristine and irradiated polyether sulfone films.	170
Figure 4.29:	TGA thermograms for pristine and irradiated polyether sulfone films.	173
Figure 4.30:	DSC thermograms for pristine and irradiated polyether sulfone films.	173
Figure 4.31:	Microhardness for pristine and irradiated polyether sulfone films.	175
Figure 4.32:	Optical micrographs of pristine and irradiated polyether sulfone films (a) pristine, (b) 10^{13} ions/cm ² , (c) 10^{14} ions/cm ² and (d) 10^{15} ions/cm ² .	176
Figure 4.33:	FTIR spectra for pristine and irradiated polycarbonate films.	180
Figure 4.34:	Conductivity versus Log f for pristine and irradiated polycarbonate films.	181
Figure 4.35:	tan δ versus Log f for pristine and irradiated polycarbonate films.	183
Figure 4.36:	Dielectric constant versus Log f for pristine and irradiated polycarbonate films.	183
Figure 4.37:	TGA thermograms for pristine and irradiated polycarbonate films.	185
Figure 4.38:	$\ln(m_0/m)$ versus $10^3/T$ (K ⁻¹) for the pristine and irradiated polycarbonate films.	186
Figure 4.39:	DSC thermograms for pristine and irradiated polycarbonate films.	186
Figure 4.40:	Microhardness for pristine and irradiated polycarbonate films.	187
Figure 4.41:	Optical micrographs of pristine and irradiated polycarbonate films (a) pristine, (b) 10^{13} ions/cm ² ,	189

	(c) 10^{14} ions/cm ² and (d) 10^{15} ions/cm ² .	
Figure 4.42:	FTIR spectra for pristine and irradiated blend polymer films.	191
Figure 4.43:	Conductivity versus Log f for pristine and irradiated polymer blend films.	193
Figure 4.44:	$\tan \delta$ versus Log f for pristine and irradiated blend polymer films.	194
Figure 4.45:	Dielectric constant versus Log f for pristine and irradiated blend polymer films.	195
Figure 4.46:	TGA thermograms for pristine and irradiated blend polymer films.	197
Figure 4.47(a):	$\ln(\ln(m_0/m))$ versus $10^3/T$ (K ⁻¹) for the pristine and irradiated blend polymer films.	197
Figure 4.47(b):	$\ln(\ln(m_0/m))$ versus $10^3/T$ (K ⁻¹) for the pristine and irradiated blend polymer films.	198
Figure 4.48:	DSC thermograms for pristine and irradiated blend polymer films.	198
Figure 4.49:	Microhardness for pristine and irradiated blend polymer films.	200
Figure 4.50:	Optical micrographs of pristine and irradiated blend polymer films (a) pristine, (b) 10^{13} ions/cm ² , (c) 10^{14} ions/cm ² and (d) 10^{15} ions/cm ² .	202
