Dear _____,

We are conducting an iron supplementation study with different dose levels of iron (60, 120, 180 mg) on pregnant women in urban slums of Baroda. Supplementation will be provided from the 20th week of gestation till delivery, to study the maternal Hb status and the infant outcome. These studies will help to determine what level of iron supplementation we should recommend for pregnant women in urban slums. Therefore we kindly request you to co-operate with us and refrain from prescribing/providing iron folate supplements to the holders of these cards during this period. We will take care of their iron supplements in full.

Thank you.

Yours sincerely,

through : The Guide and
Head, Dept of
Foods & Nutrition

A. Edward Raj
