|                                                                                                                                                                                                                                       |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Figure 1-1 Schematic of experimental set-up [4] .....                                                                                                                                                                                 | 1  |
| Figure 1-2 Classification of WPT techniques .....                                                                                                                                                                                     | 2  |
| Figure 1-3 History of electric vehicle .....                                                                                                                                                                                          | 9  |
| Figure 2-1 Two coil structure .....                                                                                                                                                                                                   | 15 |
| Figure 2-2 Dynamic charging systems with one coil design for primary coil $L_1$ = track<br>conductor; $L_2$ = receiver coils; $M$ = mutual inductance between $L_1$ and $L_2$ ; $i_1$ =<br>excitation for primary coil [27,30]. ..... | 16 |
| Figure 2-3 Dynamic charging systems with segmented-coil design for primary coil [27,30].                                                                                                                                              | 16 |
| Figure 2-4 Coil with fixture. $L_{int}$ = intermediate structure; $L_1$ = primary coil structure; $L_2$ =<br>secondary coil structure [23].....                                                                                       | 17 |
| Figure 2-5 Different types of coil structures [104-106] .....                                                                                                                                                                         | 18 |
| Figure 2-6 Compensation topologies: (a) SS, (b) SP, (c) PS, and (d) PP. ....                                                                                                                                                          | 20 |
| Figure 2-7 Two-sided LCC compensation.....                                                                                                                                                                                            | 21 |
| Figure 3-1 Biot-Savart Law .....                                                                                                                                                                                                      | 33 |
| Figure 3-2 Coil spacing .....                                                                                                                                                                                                         | 34 |
| Figure 3-3 Mutual induction.....                                                                                                                                                                                                      | 35 |
| Figure 3-4 Block diagram.....                                                                                                                                                                                                         | 36 |
| Figure 3-5 ANSYS Twinbuilder circuit and relevant waveforms.....                                                                                                                                                                      | 36 |
| Figure 3-6 Frequency vs efficiency graph .....                                                                                                                                                                                        | 37 |
| Figure 3-7 Helix coil.....                                                                                                                                                                                                            | 40 |
| Figure 3-8 Circular coil (theoretical).....                                                                                                                                                                                           | 41 |
| Figure 3-9 Design list parameters .....                                                                                                                                                                                               | 44 |
| Figure 3-10 Design list: Region & Coils .....                                                                                                                                                                                         | 44 |
| Figure 3-11 Circular coil ANSYS top view.....                                                                                                                                                                                         | 45 |
| Figure 3-12 ANSYS isometric view.....                                                                                                                                                                                                 | 45 |
| Figure 3-13 Square coil dimensions .....                                                                                                                                                                                              | 46 |
| Figure 3-14 ANSYS model of planner square coil.....                                                                                                                                                                                   | 47 |
| Figure 4-1 Magnetic flux lines of helix coil[ 7].....                                                                                                                                                                                 | 50 |
| Figure 4-2 Variation of $L$ & $M$ with number of turns for helix coil [7] .....                                                                                                                                                       | 50 |
| Figure 4-3 Coupling coefficient vs. no. of turns .....                                                                                                                                                                                | 51 |

|                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------|----|
| Figure 4-4 Variation of $k$ with $z$ axis misalignment for helix and spiral coils .....                            | 51 |
| Figure 4-5 Design model of transmitting and receiving coil in ANSYS Electronics Desktop at<br>ZDist of 5 mm.....   | 52 |
| Figure 4-6 Design model of transmitting and receiving coil in ANSYS Electronics Desktop at<br>ZDist of 150 mm..... | 52 |
| Figure 4-7 2D plot showing variation of $k$ with ZDist ( $I = 10$ & 20 Amps).....                                  | 53 |
| Figure 4-8 2D plot showing variation of $k$ with ZDist ( $I = 10$ & $I$ induced = 20 Amps) .....                   | 56 |
| Figure 4-9 Plot showing variation of $k$ with ZDist as a function YDist .....                                      | 56 |
| Figure 4-10 ZDist v/s $k$ for 0 & 10 A.....                                                                        | 61 |
| Figure 4-11 3D image showing variation of coupling co-efficient v/s YDist and v/s ZDist.....                       | 61 |
| Figure 4-12 Contour of coupling co-efficient for YDist and ZDist .....                                             | 62 |
| Figure 4-13 Plot of $L_1$ v/s ZDist, $L_2$ v/s ZDist & $M_{12}$ v/s ZDist (0 Amp & 10 Amps).....                   | 63 |
| Figure 4-14 2D contour of variation between mutual inductance, YDist and ZDist.....                                | 64 |
| Figure 4-15 Flux density at ZDist = 30 mm. ....                                                                    | 66 |
| Figure 4-16 Flux density vector at ZDist=30mm. ....                                                                | 67 |
| Figure 4-17 Flux density vector ZDist=30 mm and plate at 35 mm .....                                               | 67 |
| Figure 4-18 Flux density vector ZDist=30 mm and plate at 15 mm. ....                                               | 68 |
| Figure 4-19 Flux density vector ZDist = 30 mm and plate at 15 mm top view.....                                     | 68 |
| Figure 4-20 Flux density distribution at ZDist = 55 mm & plate 20 mm.....                                          | 69 |
| Figure 4-21 Flux density distribution at ZDist = 55 mm & plate 30 mm.....                                          | 69 |
| Figure 4-22 Flux density distribution at ZDist = 55 mm & plate 55 mm.....                                          | 69 |
| Figure 4-23 Circular coil configuration at ZDist = 5 mm .....                                                      | 70 |
| Figure 4-24 Variation of coupling coefficient with respect to ZDist for circular coil .....                        | 72 |
| Figure 4-25 Variation between self and mutual inductance with ZDist for Circular coil .....                        | 72 |
| Figure 4-26 Vertical misalignment of 5 mm and $y$ axis misalignment of 0 mm .....                                  | 73 |
| Figure 4-27 Plot showing variation of $k$ with ZDist as a function YDist .....                                     | 73 |
| Figure 4-28 Value of $k$ v/s YDist as a function of ZDist. ....                                                    | 73 |
| Figure 4-29 Value of $M$ v/s YDist as a function of ZDist.....                                                     | 74 |
| Figure 4-30 Flux density distribution around circular coils. ....                                                  | 75 |
| Figure 4-31 Flux density distribution around circular coils with less density setting. ....                        | 75 |
| Figure 4-32 Flux density distribution around circular coils in cloud form. ....                                    | 75 |
| Figure 4-33 3D plot between $f$ , ZDist and amplitude. ....                                                        | 76 |
| Figure 4-34 Comparative graph between ZDist vs Coupling coefficient. ....                                          | 77 |

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| <i>Figure 4-35 ANSYS Twin Builder simulation model.</i>                              | 78  |
| <i>Figure 4-36 Power plot.</i>                                                       | 79  |
