

## APPENDIX IV

### DATA SHEETS OF EMPLOYMENT, INCOME AND PRODUCTION

---

The sample comprises of 120 beneficiaries which include 90 Female Beneficiaries (FBs) and 30 Male Beneficiaries (MBs). Out of the 90 FBs, 9 were identified as Female Heads and in view of their growing importance, a separate analysis of them is also undertaken. The computed employment, income and production figures from the questionnaires are used for the impact analysis and the data for each household is presented in the following data sheets. Throughout all the data sheets S.Nos. 1 to 30 relate to the MBs, 31 to 120 the FBs while the FHs are represented in the S.Nos. 112 to 120. Further, for a more meaningful analysis the sample is also bifurcated into beneficiaries with one (who have received one financial dose of assistance) and two loans (who received two doses of financial assistance during the post loan period (1986-87 to 1990-91) to measure the differential degree of impact in both these loan categories.

#### Employment Generation Pattern from the Asset Financed : Gender and Loan-Wise (Data Sheet I)

For a purposeful and a penetrating gender analysis the employment effect of credit from the asset financed is studied separately for the beneficiary and spouse/kin within each category of beneficiary household.

The Data Sheet I presents the employment generation patterns; gender and loan wise.

- Columns "a" and "d" depict the employment effect of credit on the beneficiary and spouse/kin from one milch cattle (one loan).
- Columns "b" and "e" depict the employment effect of credit on the beneficiary and spouse/kin from two milch cattle (two loans).
- While, columns "c" and "f" depict the employment effect of credit on the beneficiary and spouse/kin in both the category of beneficiary households ie., one and two milch cattle (I & II Loan).

**Net Income from the Asset Financed : Gender and Loanwise**  
**(Data Sheet II)**

The credit effect of income gains significance as it establishes women's economic role in the process of development. The income generation pattern for the beneficiary and spouse for one and two loan categories is depicted in Table II. The net income from the asset financed is allocated amongst the two household members ie., the beneficiary and spouse/kin on the basis of the time spent in terms of labor hours by them on tending to milch cattle.

The Table II presents the employment generation patterns gender and loan wise.

- Columns "a" and "d" depict the income effect of credit on the beneficiary and spouse/ from one milch cattle (one loan).
- Columns "b" and "e" depict the income effect of credit on the beneficiary and spouse/kin from working on two milch cattle (two loans).
- While, columns "c" and "f" depict the income effect of credit on the beneficiary and spouse/kin in both the category of beneficiary households ie., one and two milch cattle (I & II Loan).

**Activity-Wise Household Income (Pre and Post Loan)**  
**(Data Sheet III)**

The Household income is computed for two periods of time, the pre and post loan period. Household income in pre loan period is derived by computing the individual incomes of all household members from all the economic activities pursued by them and also includes income derived from other sources. While the post loan period household income is the average income derived by the household in the post loan period from all its members through economic activities pursued by them and also includes net income from the asset financed and income from other sources.

- Columns "a" and "d" depict the income derived by the household from the farming activity in the pre and post loan period respectively (FM).
- Columns "b" and "e" depicts the income derived by the household from the agricultural wage labor activity in the pre and post loan period respectively (AWL).

- Column "c" portrays the household income in the pre loan period derived from farming and agricultural wage labor activity(TOT).
- Column "f" portrays the income derived by the household from the financed activity ie., one milch cattle (IB).
- Column "g" portrays the income derived by the household from the financed activity ie., two milch cattle (IIB).
- Column "h" portrays the household income from farming, agricultural wage labor and one loan [TOT(IB)].
- Column "i" portrays the household income from farming, agricultural wage labor and two loans [TOT (IIB)].
- Column "j" portrays the household income from farming, agricultural wage labor and one and two loans (TOT).

**Asset Financed : Quantity of Production, Value of Production, Working Expenses and Net Income (Data Sheet IV)**

The production, employment, working expenses, value of production and net income from the asset financed was computed for one and two loan categories. The above variables were used in the production function analysis to assess the relationship between labor, capital (working expenses) and the output (Chapter Six, Section II). Further, they were also used to determine the net income of the households from the asset financed.

- Column "a" portrays the production of milk in liters from the animals financed by the IRDP loans.
- Column "b" depicts the value of production for the beneficiaries from both the milch animals financed by the IRDP loans.

$$\text{Value of Production} = \frac{\text{Production}}{\text{in litres}} \times \frac{\text{Price}}{\text{in Rs.}}$$

- Column "c" depicts the working expenses in Rs. incurred by the beneficiaries in maintaining the milch animals financed under IRDP. The working expenses refer to the expenses incurred on dry and green fodder, veterinary and other expenses.
- Column "d" depicts the net income of beneficiary households from the financed activity ie., milch cattle activity.
