

## LIST OF TABLES

TABLE	PAGE NO.
3.1 Properties of Test Beams and Reinforcing Steel	58-59
3.2 Concrete Test Results	60
4.1 Load and Deflection Characteristics of Test Beams	76-77
4.2 Inclined Cracking Load and Reserve Strength of Test Beams	78-79
5.1 Direct Tension Test Results of Concrete Specimens	130-131
5.2 Computation of Enhancement Factors	
a) Strain Enhancement Factors	132
b) Moment Capacity Enhancement Factors	133
5.3 Maximum Strain in Web Steel	134
6.1 Maximum Surface Concrete Strain	154-155
6.2 Crack details of Tested Beams	156
6.3 Comparison of Observed and Computed Maximum Crack Width	157
6.4 Comparison of Calculated and Experimental Ultimate Loads of Beams	
(a) Without Fibres	158
(b) Full Depth Fibre Condition	158
(c) Lower Half Depth Fibre Condition	159
6.5 Computation of Ultimate Flexural Moments for Moderate Deep Beams	160
6.6 Computation of Ultimate Shear Loads for Deep Beams	161
6.7 Computation of Ultimate Flexural Moments of Beams Considering Strain Hardening of Steel	162
