

ACKNOWLEDGMENTS

My deepest gratitude to Prof. M.M. Dadi. It is only through his boundless encouragement and continued support over the years that I am able to complete this research work.

No words can adequately acknowledge my gratitude to Dr. Alla Subbarao, and Mr B.C. Patel with whom I spent hours discussing various issues. I gained vastly from their expertise in computer.

I am specially grateful to Prof. Thomas D' Amico, and Prof. Manna, Department of Economics, St. Peter's College, Jersey City for disposing their trust in my ability to teach at St. Peter's College and keeping my interest in research alive.

I gratefully acknowledge the support received from Prof. S.R. Hashim, Member, Planning Commission, Government of India for providing me with all the official documents necessary for this work. Very specially I thank him for the Input-Output table for the year 1984-85 and 1989-90.

Finally I thank my brothers and sisters, whose constant prayers strengthened me before and all through this work. And above all, I thank my wife Elsa who herself is pressed with her own work and studies, for her tireless devotion in making our home a contented one in spite of all the strains of busy schedule, and our loving daughters Megha and Sneha who are our greatest source of joy.
