CHAPTER - 1:

Introduction	1
---------------------	---

CHAPTER - 2:

Literature Review :

a. Facultative Ponds... ..	5
b. Activated algae	13
c. High-rate aerobic ponds.	15
d. Definition of Symbiosis.	19
e. Algal-bacterial Symbiosis... ..	20

CHAPTER - 3:

Materials and Methods :

3.1 <u>Test Conditions:</u>	25
a. The algal culture room	25
b. Lighting arrangements in the algal culture room..	25
c. Temperature of the algal culture room	26
d. The intensity of illumination in algal culture room... ..	26
e. Isolation, acclimatization and maintenance of stock algal cultures.. for laboratory scale experiments ...	26
f. Laboratory set up of the apparatus for batch culture experiments on algal bacterial symbiosis	30
3.2 <u>Methods:</u>	31
A. Sample collection of analysis... ..	31
i. Sterility test for the Labora- tory equipments and media... ..	32

II

<u>Contents</u> (contd.)	<u>Page</u>
B. <u>Bacteriological examination</u>	32
a. Object of the examination..	32
b. Three types of tests... ..	32
i. Coliform group..	32
ii. Total colonies count at 37°C temperature after 24 hrs.... ..	33
iii. Isolation of heterotrophic non-photosynthetic bacteria from sewage agar	33
iv. Classification and identi- ty of the genera	35
v. <u>Typing or Characterization of the heterotrophic non-photosynthetic bacterial isolates</u>	36
a) <u>Staining reactions</u> :..	36
i. Gram	36
ii. Acid fast.	36
iii. Spore	36
iv. Flagella..	36
v. Capsule	36
vi. Cell wall.	37
b) <u>Reserve food material</u>	37
i. Lipid inclusions..	37
ii. Glycogen..	37
iii. Volutin	37
c) <u>Enzyme activity</u>	37
i. Catalase..	37
d) <u>Physiological</u>	37
i. Nitrate reduction.	37
ii. Indole production.	37
iii. H ₂ S production	37

III

<u>Contents (contd.)</u>	<u>Page</u>
iv. Gelatin liquifaction	37
v. Starch hydrolysis... ..	38
vi. Fermentation tests.. ...	38
vii. Methyl red and Voges Proskour test	38
viii. Citrate utilization.	38
ix. Nitrogen fixation... ..	38
x. Ammonia oxidation... ..	38
xi. Tributyrin hydrolysis... ..	39
xii. Hugh and Leifson's technique	39
C. <u>Physical Examination:</u>	40
i. Colour and Turbidity	40
ii. Temperature	40
iii. pH	40
D. <u>Chemical Examination:</u>	40
i. BOD ₅ at 20°C... ..	40
ii. COD... ..	40
iii. Phosphate.. ...	40
iv. Nitrite nitrogen	40
v. Nitrate nitrogen	40
vi. Ammonia nitrogen	40
vii. Alkalinity (Phenolphthalein)	41
E. <u>Biochemical Examination:</u>	41
i. Protein and amino-nitrogen.. ...	41
ii. Carbohydrates.. ...	42
a. Total sugar	42
b. Free sugar.. ...	42
iii. Volatile acids.. ...	43
F. <u>Biological Examination</u>	43
i. Microscopic	43
a. Dry weight.	44
b. N and P content.	44

IV

Content (contd.)

Page

CHAPTER - 4 :

<u>Scientific Results</u>	45
A. <u>Physical variables:</u>	46
i. Temperature of the liquid cultures.....	46
ii. Colour and Turbidity.	46
iii. pH	46
B. <u>Chemical variables:</u>	47
i. Phenolphthalein alkalinity....	47
ii. Ammonia nitrogen.	47
iii. Nitrite and nitrate nitrogen.	48
iv. Orthophosphate (PO ₄).	48
v. BOD ₅	49
vi. COD _{cr}	49
C. <u>Biochemical variables:</u>	50
i. Percentage reduction in Free sugar, total sugar, protein, Amino-acid nitrogen and Volatile acids (lower fatty acids) ...	50
D. <u>Biological changes using Oscillatoria</u> spp.	52
E. <u>Bacteriological Examination using</u> <u>Oscillatoria</u> Spp.....	52
i. For Sanitary Aspect....	52
ii. Distribution of a few important attributes among the 200 dominant isolates....	54
iii. Dominant micro-organisms in the High-rate pond	56
iv. Micro-organisms classified tentatively as representing "Assimi- latory" and Endogenous phases ...	57

Contents (contd.)PageCHAPTER - 5:Discussion of the Experimental Results;
an experimental evaluation of algal-
bacterial Symbiosis.

A. <u>Bio-oxidation of decomposing</u> <u>sewage organic matter</u>	59
1. Four important principles of bio-oxidation of organic matter.. ...	59
2. Biochemical assessment of viable bacteria and related results in growth cycles of algal-bacterial symbiosis with the two algae: <u>Oscillatoria</u> <u>Spp. & Anacystis nidulans</u>	63
i. Removal of polluting organic matter as COD	64
ii. Calculation of bacterial growth and synthesis according to Sawyer (1956)... ..	66
a. Total bacterial mass in the case of control(raw sewage) used for <u>Oscillatoria Spp. and Anacystis</u> <u>nidulans</u>	67
b. Total bacterial mass in algal treated samples	68
iii. Calculations of actual biomass and decrease in active biomass due to endoge- nous metabolism according to McKinney, (1962).....	68

VI

<u>Contents (contd.)</u>	<u>Page</u>
a. Calculation of the control raw sewage samples used in the two algal experiments	70
b. Calculation for the algal treated samples..	70
c. Calculation of total bacterial mass, active bacterial mass and endogenous bacterial mass	72
d. Quantitative evaluation of algal-bacterial symbiosis in the case of two two algal types experimented with Baroda raw, strained sewage..	75
iv. Conversion of COD values into organic matter values according to Porges (1960)	75
v. Calculation of oxygen required and carbon dioxide released during bacterial oxidation of Baroda Sewage organic matter according to Oswald et al.(1958)	77
vi. Oxygenation factor..	78
vii. Different Phases of bacterial oxidation in High-rate aerobic Oxidation Pond... ..	80
a. Definition of Endogenous metabolism	80
b. Different phases of microbial metabolism... ..	81
c. Application to the results... ..	82
B. <u>Algal Photosynthesis</u> :	85
1. Theoretical considerations.	85

VII

<u>Contents</u> (contd.)	<u>Page</u>
a. Concepts of algal Growth	85
b. Light Intensity	86
c. Efficiency of light energy conversion.. ...	87
d. Temperature	88
e. Carbon source.. ...	89
f. Inorganic nutrients	90
2. <u>Application to connected results</u>	92
i. CO ₂ used up during Photosynthesis... ..	93
ii. Quantity of photosynthetic oxygen released into biosystem	93
3. <u>Overall Photosynthetic energy conversion efficiency.. ...</u>	94
i. Theoretical consideration	94
ii. Application to connected results	96
a. <u>Oscillatoria</u> Spp... ..	96
b. <u>Anacystis nidulans</u>	97
C. <u>Biostimulatory nutrients and their removal during algal photosynthesis:</u>	
1. Theoretical consideration.. ...	98
2. Application to connected results	99
i. Carbon considerations	99
ii. Ratios of COD and Organic carbon to Phosphate-phosphorus	102
iii. Ratio of N:P in algal Photosynthesis	103
iv. Nitrogen utilization in algal photosynthesis	103
a. Nutrients in raw settled sewage.. ...	107
b. Nutrients in algal bacterial symbiosis	108

VIII

<u>Contents (contd.)</u>	<u>Page</u>
D. <u>Algal-bacterial Symbiosis in</u> <u>High-rate Ponds</u>	108
1. <u>Theoretical considerations.</u>	108
i. Stoichiometry of algal bacterial symbiotic system	108
2. <u>Application to connected results...</u>	111
i. Quantity of oxygen released during algal photosynthesis is compared with the quantity of oxygen required for total bacte- rial oxidation of polluting organic matter.... ..	111
ii. Carbon dioxide released during total bio-oxidation of polluting organic matter is compared with the quantity used for algal bio- mass production in the algal- bacterial symbiosis... ..	112
iii. Excess of CO ₂ released and used in algal photosynthesis explained	113
3. Regression analysis of nutrient strength expressed as COD and algal biomass and correlation coefficient for the two algae i.e. <u>Oscillatoria</u> Spp. and <u>Anacystis nidulans</u>	113
4. Biochemical aspects of the experi- ment using <u>Scenedesmus obliquus</u>	116
5. Biological aspects of the experiment using <u>Oscillatoria</u> Spp.	117

IX

Contents (contd.)	<u>Page</u>
6. Bacteriological aspects	117
i. Microorganisms in action in sewage purification... ..	117
ii. Microorganisms identified in activated sludge..	121
iii. Microorganisms in action in High-rate aerobic pond	126
7. Basic facts about the metabolic reactions taking place in an activated sludge process... ..	126
8. <u>Why "total Oxidation" is impossible</u> <u>in High-rate Aerobic Ponds?</u>	130
i. An account of the working of High-rate aerobic pond	131
ii. "complete oxidation" and "constant sludge" volume in activated sludge process and in High-rate aerobic Pond	138
iii. Is total oxidation possible?..	139
iv. "A constant volume" of sludge in High-rate aerobic pond	140

CHAPTER - 6 :

A. <u>Economic importance of using High-rate</u> <u>aerobic Oxidation Ponds..</u>	141
i. Production of power from solar energy by means of algae... ..	141
ii. Production of cheap algal protein	142

X

<u>Contents</u> (contd.)	<u>Page</u>
iii. Preventing eutrophication of receiving waters	143
iv. Helpful in softening hard waters	144
v. For establishing industria- lised food production complexes	144
vi. Economics of nitrogen utiliza- tion in high-rate aerobic oxidation pond and its conventional agriculture... ..	145
vii. Salvaging Sea water for algal protein	146
B. <u>S U M M A R Y</u>	148
C. <u>C O N C L U S I O N</u> (<u>Credits</u>)	154
<u>R E F E R E N C E S</u>	156
<u>T A B U L A R</u> <u>S T A T E M E N T S</u>
