LIST OF TABLES

1. Physico-chemical aspects using Oscillatoria Spp.
2. Physico-chemical aspects using Anacystis nidulans
3. Biological changes using Oscillatoria Spp.
4. Physico-chemical and Biochemical conditions using Scenedesmus obliquus
5. Biological changes using Scenedesmus obliquus
6. Bacteriological examination (Sanitary Aspect) in high-rate aerobic oxidation pond using Oscillatoria Spp.
7. Distribution of a few important attributes among the 200 dominant bacteria isolated from the alga. Oscillatoria Spp. treated high-rate aerobic oxidation pond on different detention periods.
8. Important biochemical characteristics of the dominant bacteria in high-rate aerobic oxidation pond using Oscillatoria Spp.
9. Dominant Bacteria in High-rate aerobic oxidation pond with Oscillatoria Spp. isolated on different detention periods.
10. Dominant bacteria isolated from Assimilatory and endogenous phases of high-rate aerobic oxidation pond.
