

CONTENTS

CHAPTER	TITLE	PAGE
I	INTRODUCTION	
I.1	Catalysts and catalytic processes	1
I.2	Types of catalysis/catalysts	1
I.3	Supported metal catalysts	3
I.3.1	Features of supported metal catalysts	4
I.4	Design of catalysts	5
I.4.1	Active species	6
I.4.2	Choice of promoters/poisons	8
I.4.3	Nature of support	8
I.4.4	Method of incorporation of active species	10
	1. Equilibrium adsorption/ion exchange/wet impregnation	
	2. Pore filling/dry impregnation/incipient wetness method	
	3. Co-precipitation	
	4. Deposition precipitation	
I.4.5	Pretreatments	15
I.5	Development of catalysts: from art to science	15
I.6	Aim and scope of the work	19
II	EXPERIMENTAL METHODOLOGY	
II.1	Purity and purification of reagents	23
II.2	Preparation of spheroidal alumina:	
	sol-gel/oil drop method	23
II.2.1	Designation of alumina samples	25
II.3	Preparation of catalysts	26
II.3.1	Designation of catalyst samples	27

II.4	Characterisation of catalysts and supports	28
II.4.1	Chemical analysis	28
II.4.2	Determination of physical properties	29
II.4.3	Textural properties	29
II.4.4	Infrared spectroscopic studies	30
II.4.5	Thermal analysis	30
II.4.6	Electron microscopy	31
II.4.7	Dispersion measurements	31
II.4.8	Ammonia chemisorption and TPD	32
II.4.9	Temperature programmed reduction	33
II.4.10	Temperature programmed oxidation	33
II.4.11	Diffuse reflectance spectroscopy	34
II.4.12	Electron spectroscopy for chemical analysis	34
II.5	Activity evaluation	35
II.5.1	Dehydrogenation of n-dodecane	35
II.6	Kinetics of n-dodecane dehydrogenation	
	on Pt-Sn-Li/Al ₂ O ₃ catalyst	36
II.6.1	Type of reactor and reactor aspect ratios	36
II.6.2	Mass transfer studies	37
II.6.3	Data collection for the determination of kinetics	37
	1. Effect of space velocity on conversion	38
	2. Effect of partial pressures on conversion	38
II.6.4	Data analysis	38
III	STUDIES ON SPHEROIDAL GAMMA ALUMINA	
III.1	Introduction	41
III.1.1	Choice of alumina as a support	41
III.2	Preparation of alumina	43

1. Aluminium hydroxides and oxyhydroxides	44
2. Transition aluminas	48
III.3 Methods of modification of pore structure of alumina	52
1. By controlling particle/agglomerate size and shape	53
2. By using additives	54
III.4 Aim and scope of the work	55
III.5 Characterisation of alumina sol	57
III.6 Characterisation of alumina precursors	59
III.6.1 X-ray powder diffraction	59
III.6.2 Infrared spectroscopic studies	60
III.6.3 Thermal analysis	60
III.7 Characterisation of transition aluminas	62
III.7.1 Average sphere size	62
III.7.2 Apparent bulk density	63
III.7.3 Crushing strength	63
III.7.4 X-ray diffraction studies	63
III.7.5 Morphology of alumina samples	65
III.7.6 Textural properties	66
III.7.7 Surface acidity measurements	69
III.8 Conclusions	71
IV STUDIES ON PROMOTED PLATINUM ON ALUMINA CATALYSTS	
IV.1 Introduction	72
IV.1.1 Methods of preparation of Pt/alumina catalysts	75
IV.1.2 Pretreatments	76
IV.1.3 Use of promoters	78
IV.2 Aim and scope of the investigation	82
IV.3 Characterisation of lithium modified gamma alumina	84

IV.4	Characterisation of precursors and catalysts	85
IV.4.1	Chemical analysis	86
IV.4.2	Dispersion measurements	88
IV.4.3	Temperature programmed reduction studies	91
IV.4.4	Diffuse reflectance spectroscopic studies	96
IV.4.5	Electron spectroscopy for chemical analysis (ESCA)	101
IV.5	Activity evaluation	104
IV.5.1	Activity evaluation at atmospheric pressure conditions	104
IV.5.2	High pressure reaction studies	106
IV.5.3	Studies on the selectivity of the catalysts for different products	108
IV.5.4	Temperature programmed oxidation studies	112
IV.6	Promoted platinum on alumina catalysts: correlations between properties and performance	115
V	STUDIES ON THE KINETICS OF DEHYDROGENATION OF n-DODECANE ON Pt-Sn-Li/Al ₂ O ₃	
V.1	Introduction	119
V.2	Aim and scope of the work	120
V.3	Studies on mass transfer effects	121
V.4	Kinetics of n-dodecane dehydrogenation on Pt-Sn-Li/Al ₂ O ₃	124
V.4.1	Data analysis	125
V.4.2	Model development	126
V.4.3	Criteria for model acceptance	126
V.4.4	Parameter estimation	126
V.4.5	Power law model	128

V.4.6	Adsorption type models (Langmuir-Hinshelwood type)	129
	List of symbols and abbreviations used	

APPENDICES

I	Model derivation of Langmuir-Hinshelwood type models	134
II	Listing of the computer programs for parameter estimation using Simplex method and polynomial regression	137
III	Relationship between parameters and terms appearing in integral equations	150
IV	Stoichiometry of n-dodecane dehydrogenation	151
