

TABLE OF CONTENTS

	<u>PAGE</u>
CHAPTER I - INTRODUCTION	- 1-1 - 1-13
General principles involved in the three treatment processes.....	2
The basis for success in each method....	2
Differences in purification time in each case.....	3
Mechanism of purification in each case..	5
Algal-bacterial symbiosis.....	6
How oxidation pond method is more economical and useful.....	7
Lack of information about the microbial and biochemical changes taking place in oxidation pond.....	11
CHAPTER 2 - LITERATURE REVIEW.....	- 2-1 - 2-53
Microbial Metabolism in Activated Sludge Process.....	2
Reducers.....	2
Nutrient utilization phase I	3
Relative distribution of the quality and quantity of microorganisms involved in substrate utilization.....	3
Bacterial adaptation.....	6
Changes in bacterial population.....	11
Theory and mechanism of flocculation of the synthesised cells (Phase II) in activated sludge process.....	12
Special flocculating bacterial theory.	12
Flocculation resulting from the capsule secreted by the bacterial sticking together.....	13
Biophysical and adsorption theory.....	14
Bio-synthesis of the endogenous metabolite (PHB) and the direct chemical bond theory.....	16

Table of Contents (Contd.)

	PAGE
Chapter 2	-2-1 - 2-53
Theory of electro-kinetic phenomenon on bacterial surface and the chemical composition of the slimy layer.....	18
Bacterially produced polymer bonding- bridging theory.....	19
Consumers.....	19
The phylum protozoa.....	19
Role of protozoa in the purification of sewage.....	21
Inter-relationship between protozoa and Bacteria.....	24
Protozoa as indicators of the degree of pollution and purification.....	27
Protozoan succession during sludge formation.....	28
Indicator organisms.....	31
Producers.....	39
Oxidation pond	41
Historical.....	41
Role of algae in the purification of sewage.....	44
Algal-bacterial symbiosis.....	50
Algal-protozoan relationship.....	52
CHAPTER 3 - MATERIALS AND METHODS	3-1 - 3-33
Materials.....	2
Literature review of laboratory models..	2
Laboratory scale oxidation pond.....	7
Raw Sewage used.....	8
Chemicals and glasswares.....	9
Methods.....	9
Sample collection.....	9
Bacteriological examination.....	10
Multiple tube dilution technique.....	10
Total colonies count and isolation of Individual strains.....	10

Table of Contents (Contd.)

	PAGE
Chapter 3	3-1 - 3-33
Typing and characterisation of bacterial isolates.....	12
Biological examination.....	14
Physico-chemical examination.....	15
Physical.....	15
Chemical.....	15
Biochemical examination.....	16
Soluble organic constituents.....	16
Free sugar.....	17
Total sugar.....	17
Amino acid nitrogen.....	17
Protein.....	18
Total fat.....	18
Chlorophyll-a.....	18
Viscous Scum.....	19
Isolation.....	19
Biochemical examination.....	21
Acetone powder preparation.....	21
Enzymes studies.....	22
Isolation of PHB.....	22
Pure culture studies with bacteria.....	22
Screening of the bacteria.....	24
Actual pure culture studies with the selected strains.....	25
Pure culture studies with algae and bacteria..	26
Isolation and maintenance of pure algal cultures.....	26
Free from other algae.....	26
Bacteria - free algae.....	28
Experiments with Group I algae.....	31
(Chlorella and 2 species of Oscillatoria).	
Experiments with Group II algae.....	33
(Scenedesmus, Aulosira and Nostoc).....	33

Table of Contents (Contd.)

	PAGE
CHAPTER 4 - THE ECO-SYSTEM	4-1 - 4-63
Experimental data.....	2
Setting up the laboratory model.....	2
The environment: changes taking place in the liquid medium.....	2
Physico-chemical variables.....	2
Colour.....	2
Turbidity.....	4
pH.....	4
Alkalinity.....	4
Dissolved oxygen	4
BOD (5 day at 20°C).....	4
Acid KMnO ₄ value (4 hours).....	6
Orthophosphate.....	6
Ammonia-nitrogen.....	6
Nitrite-nitrogen.....	6
Nitrate-nitrogen.....	6
Changes in the soluble organic constitu- ents.....	7
Free-sugar.....	7
Total sugar.....	7
Amino acid nitrogen.....	7
Protein.....	7
Total fat.....	7
Chlorophyll-a.....	7
Biological changes.....	8
Bacteriological changes.....	13
Changes in coliform group density....	13
Coliform at 37°C.....	13
E.Coli Type I at 44°C	13
Faecal strepto-cocci at 45°C.....	13
Citrate utilisers.....	16

Table of Contents (Contd.)

	PAGE
Chapter 4	4-1 - 4-63
Total colonies count	16
Changes in the indigenous flora.....	16
Gram stain	16
Chromogenesis.....	18
Special staining reactions.....	19
Biochemical characteristics.....	21
Starch hydrolysis	21
Gelatin liquefiers.....	24
Tributyryl hydrolysers.....	24
Nitrate reducers.....	24
Ammonia oxidisers.....	24
Nitrogen fixers.....	24
Citrate utilisers.....	24
Fermentation reactions.....	25
Glucose.....	25
Sucrose and lactose.....	25
Typing the organisms.....	25
Discussion.....	28
Nature and concentration of organic constituents of raw sewage.....	28
Changes taking place in the liquid medium..	31
Absence of acidity in the two phases.	35
Absence of dissolved oxygen in the bacterial phase and its presence in large amounts in the algal phase.....	37
Gradual increase in Chlorophyll-a content.....	38
Large protozoan population seen in the bacterial phase.....	40
Coliform group density.....	42
Coliform group density reduction and its relation to soluble organic constituents.....	47

Table of Contents (Contd.)

	PAGE
Chapter 4	4-1 - 4-63
Relation between total sugar, starch hydrolysers, and capsulated micro- organisms.....	48
Relation between the protein content and the gelatin liquefiers.....	52
Relation between Ammonia-nitrogen content, ammonia oxidizing and nitrate reducing bacteria.....	52
Relation between fat content, tributyrin hydrolysers and bacteria storing fat droplets.....	54
Relation between fat content, chloro- phyll-a and total colonies count.....	57
Increased fat content in the medium...	57
Carbohydrate metabolism, endogenous respiration and sludge formation.....	60
Summary.....	63
CHAPTER 5 - BIONOMIC STUDIES ON THE VISCOUS SCUM FORMED AT THE SURFACE.....	5-1 - 5-43
Viscous scum	2
Biological	2
Biochemical	4
Enzymatic activity	4
Organic constituents	6
Bacteriological	8
Cultural characteristics of the isolates.....	9
Physiological characteristics.....	10
Classification of the bacteria.....	12
Bacteria not isolated.....	13
Characterisation and identification. of zoogloea organisms.....	13
Comparison of our zoogloea strains with those obtained from Dr. Barry Friedmen and Dr. Koby Crabtree.....	22
Discussion	25
Zoogloea ramigera, the present position	25

Table of Contents (Contd.)

	PAGE
Chapter 5 -	5-1 - 5-43
Criteria used by the earlier Investigators.....	27
Criteria used by the latest investi- gators.....	28
Comparison with Crabtree and McCoy's Zoogloea strain 1-16-M.....	32
Comparison with the Group I isolates of Unz and Dondero	33
Comparison with the Zoogloea strains isolated by Friedman and Dugan.....	34
Comparison between the typical microflora in seven different activated sludge samples of Dias and Bhat, and in the viscous scum formed during the bacterial phase I.....	35
Summary	42
CHAPTER 6 - VISCOUS SCUM FORMED WITH OTHER INDIAN SEWAGES AND SEWAGE EFFLUENTS	6-1 - 6-21
Viscous scum.....	2
Baroda sewage Disposal Works.....	3
Raw sewages from Baroda and Bangalore.	9
Industrial and Sanitary wastes from Alembic Chemical Works, Baroda.....	9
Atladra Sewage Disposal Works, Baroda	12
Delhi Sewage Disposal Works at Okhla.	12
Discussion	16
Viscous scum formation at the surface of stored sewage.....	17
Summary	21
CHAPTER 7 - STUDIES ON SLIMY GROWTHS COLLECTED FROM DIFFERENT SITUATIONS IN THE TWO SEWAGE DISPOSAL WORKS AT BARODA AND THE ONE AT NEW DELHI	7-1 - 7-14
Slimy growths - literature Review	2
Slimy growths collected from Baroda.	
Wadi Sewage Disposal Works	7
Atladra Sewage Disposal Works.....	8
Slimy growths collected from Delhi Sewage Disposal Works	9
Discussion	11
Summary	14

Table of Contents (Contd.)

	PAGE
CHAPTER 8 - EXPERIMENTAL STUDIES ON ALGAL-BACTERIAL SYMBIOSIS	8-1 - 8-51
Results of 10 selected bacterial strains	2
Results of the experiments with the Group I algae and mixture of bacteria...	13
Results of experiments with the Group II algae and mixture of bacteria	20
Discussion	41
Summary	50
CHAPTER 9 - GENERAL SUMMARY - MECHANISM OF SEWAGE PURIFICATION IN THE OXIDATION POND METHOD	9-1 - 9-29
Composition of sewage.....	2
Mechanism of sewage purification by the activated sludge process.....	4
The biological characteraof the activated sludge floc.....	5
Removal of finely dispersed or colloidal matter in sewage.....	7
Response of activated sludge to various soluble organic substrates.....	8
Mechanisms of purification in the oxidation pond method.....	17
Formation and role of the viscous scum	18
Characteristics of the Viscous scum..	18
How the viscous scum is formed.....	20
Importance and role of the viscous scum in sewage purification.....	22
Changes taking place in the liquid medium	24
Future lines of work arising from this thesis.....	29
