

CONTENTS

LIST OF TABLES	I
LIST OF FIGURES	II
1. INTRODUCTION	1
2. LITERATURE SURVEY	5
2.1 Historical Perspectives	6
2.2 Emulsion liquid membrane separation process	7
2.3 Transport mechanisms into emulsion liquid membranes	10
2.4 Essential features of emulsion liquid membranes (ELMs)	14
2.4.1 Membrane materials	15
2.4.2 Surfactants	19
2.4.3 Emulsion preparation	22
2.4.4 Emulsion stability	24
2.4.5 Emulsion dispersion techniques	26
2.4.5.1 Emulsion globule size and its prediction	27
2.4.6 Emulsion swelling	30
2.4.7 Membrane Leakage	33
2.4.8 Demulsification	35
2.5 Type I facilitated transport	39
2.5.1 Extraction of phenol	40
2.5.2 Extraction of phenol derivatives and other weak acids	43
2.5.3 Extraction of weak bases	47
2.5.4 Biomedical applications of emulsion liquid membranes	48
2.5.5 Commercial applications of Type I Transport	48
2.6 Type II facilitated transport	49
2.6.1 Acidic carriers	51
2.6.1.1 Chelating carriers	51
2.6.1.2 Organic acid carriers	52

2.6.2	<i>Basic carriers</i>	54
2.6.3	<i>Neutral or solvating carriers</i>	58
2.6.4	<i>Copper extraction using emulsion liquid membranes</i>	60
2.6.5	<i>Metal extraction using emulsion liquid membranes</i>	63
2.6.6	<i>Biochemical and other applications</i>	72
2.7	Summary	73
3.	EXPERIMENTAL METHODS AND ANALYTICAL PROCEDURES	76
3.1	Materials and reagents	76
3.2	Emulsion liquid membrane formulation methodology	79
3.3	Emulsion characterization	80
3.4	Experimental setup and extraction methodology	82
3.5	Analytical measurements	84
3.6	Ancillary parametric measurements	86
4.	RESULTS AND DISCUSSION: EXTRACTION OF PHENOLS	89
4.1	Introduction	89
4.2	Characterization of extracting emulsions	90
4.2.1	<i>Internal dropsizes distribution of W/O emulsions</i>	90
4.2.2	<i>Specific gravity of emulsions</i>	95
4.2.3	<i>Rheological properties of emulsions</i>	95
4.2.3.1	<i>Effect of ϕ on η</i>	96
4.2.3.2	<i>Effect of C_{10} on η</i>	97
4.2.4	<i>Interfacial tension</i>	101
4.3	Dispersion behavior of emulsions	103
4.3.1	<i>Effect of stirring speed</i>	105
4.3.2	<i>Effect of internal phase volume fraction ϕ</i>	110
4.3.3	<i>Effect of internal phase reagent concentration on dispersion Characteristics</i>	113
4.3.4	<i>Effect of Treat ratio</i>	116
4.3.5	<i>Prediction of globule size</i>	119

4.4	Distribution coefficients and effective diffusivities	
4.4.1	<i>Distribution coefficients of phenols between kerosene and water</i>	121
4.4.2	<i>Prediction of effective diffusivities</i>	123
4.5	Extraction of phenol	124
4.5.1	<i>Effect of stirring speed</i>	125
4.5.2	<i>Effect of internal phase volume fraction (Φ)</i>	128
4.5.3	<i>Effect of surfactant concentration</i>	130
4.5.4	<i>Effect of internal phase reagent concentration</i>	133
4.5.5	<i>Effect of Treat ratio</i>	136
4.5.6	<i>Effect of initial phenol concentration</i>	139
4.5.7	<i>Extraction of phenol at constant molar ratio M</i>	142
4.5.7.1	Effect of treat ratio at constant molar ratio	143
4.5.7.2	Effect of initial phenol concentration at constant molar ratio	146
4.5.8	<i>Effect of temperature</i>	149
4.5.9	<i>Effect of membrane material</i>	150
4.5.10	<i>Effect of delayed addition of solute</i>	151
4.6	Extraction of o-cresol	152
4.6.1	<i>Effect of stirring speed</i>	153
4.6.2	<i>Effect of internal phase volume fraction (Φ)</i>	157
4.6.3	<i>Effect of surfactant concentration</i>	159
4.6.4	<i>Effect of internal phase reagent concentration</i>	162
4.6.5	<i>Effect of Treat ratio</i>	164
4.6.6	<i>Effect of initial o-cresol concentration</i>	166
4.6.7	<i>Effect of temperature</i>	168
4.6.8	<i>Effect of membrane material</i>	169
4.6.9	<i>Extraction using acrylate emulsifier</i>	171
4.7	Extraction of p-cresol	172
4.7.1	<i>Effect of internal phase volume fraction (Φ)</i>	173
4.7.2	<i>Effect of internal phase reagent concentration</i>	175
4.7.3	<i>Effect of Treat ratio</i>	176
4.7.4	<i>Effect of initial p-cresol concentration</i>	178

4.8	Extraction of 2-chlorophenol	180
4.8.1	<i>Effect of internal phase volume fraction (ϕ)</i>	180
4.8.2	<i>Effect of internal phase reagent concentration</i>	182
4.8.3	<i>Effect of Treat ratio</i>	183
4.8.4	<i>Effect of initial 2-chlorophenol concentration</i>	184
4.9	Features of emulsion swelling and breakage	186
4.9.1	<i>Swelling of emulsions</i>	186
4.9.2	<i>Emulsion breakage /leakage</i>	189
4.9.3	<i>Some aspects of emulsion stability</i>	190
4.10	An integral view of separation of phenols	192
4.10.1	<i>Effect of ϕ on extraction of phenols at $M = 2$</i>	193
4.10.2	<i>Effect of Treat ratio on extraction of phenols at $M = 2$</i>	198
4.10.3	<i>Effect of C_{∞} on extraction of phenols at $M = 2$</i>	200
5	RESULTS AND DISCUSSION:	
	EXTRACTION OF COPPER AND NICKEL	203
5.1	Introduction	203
5.2	Chemistry of metal extractions	205
5.3	Characterization of extracting emulsions	207
5.3.1	<i>Internal dropsize distribution of water in oil emulsion</i>	207
5.3.2	<i>Rheological properties of extracting emulsions</i>	208
5.4	Dispersion behavior of emulsions	211
5.5	Extraction of copper using ELMs	218
5.5.1	<i>Effect of stirring speed</i>	218
5.5.2	<i>Effect of C_{10}</i>	220
5.5.3	<i>Effect of surfactant concentration</i>	222
5.5.4	<i>Effect of internal phase volume fraction ϕ</i>	223
5.5.5	<i>Effect of carrier concentration</i>	225
5.5.6	<i>Effect of Treat ratio</i>	227
5.5.7	<i>Effect of pH of external phase on extraction</i>	229

5.6	Extraction of copper and nickel from ammoniacal media using ELMs	234
5.6.1	<i>Effect of extraction of nickel from ammoniacal media</i>	235
5.6.2	<i>Extraction of copper and nickel from ammoniacal media</i>	238
5.7	Features of emulsion swelling and breakage	239
5.8	Summary	240
6	TRANSPORT OF SOLUTES INTO EMULSION LIQUID MEMBRANES: MODELING AND SIMULATION	242
6.1	The advancing front model	243
6.1.1	<i>Prediction of extraction profile using the advancing front model</i>	248
6.2	The reversible reaction model	253
6.2.1	<i>Prediction of extraction profiles using the reversible reaction model</i>	257
6.3	Summary	263
7	SUMMARY AND CONCLUSIONS	264
7.1	Characterization of ELMs	264
7.2	Extraction of phenols	265
7.3	Extraction of copper and nickel	267
7.4	Scope for future work	269
